Kalvolac CAIR: helps your calves breathe easily

Healthy breathing, a shiny coat and optimal growth. Clear characteristics of healthy calves. The basis for a healthy and productive herd and the key to sustainable dairy farming. To help you achieve these goals, FrieslandCampina Nutrifeed developed Kalvolac CAIR.

Kalvolac CAIR is our latest innovation

CAIR is a blend of fragrant herbs and essential oils that supports a healthy respiratory tract. It is added to the calf milk replacer Kalvolac. Kalvolac CAIR is suitable for both bucket feeding and machines.

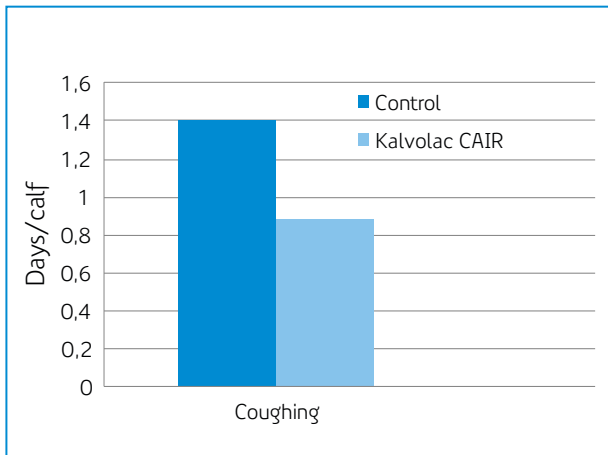

- Supports a healthy respiratory tract and optimal breathing.
- Contributes to healthy growing calves, thanks to an optimal concentrate intake.
- Contributes to a reduction of antibiotic use related to respiratory health.

Proven better results with Kalvolac CAIR

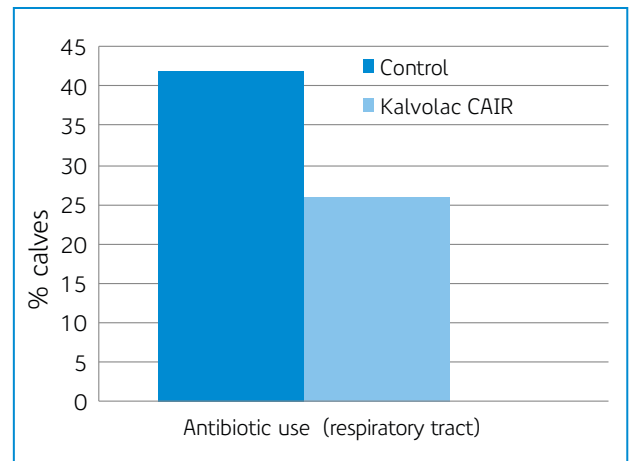

Research shows that, when calves are fed with Kalvolac CAIR for 8 weeks, coughing is reduced by 33% and less medication is needed. In addition, roughage and concentrate intake increases by 15%. The result of healthy calves? Strong and healthy cows, with a higher production and higher longevity. For you this means more pleasure in your work and a higher efficiency with less young stock on farm.

33% less coughing in calves fed with Kalvolac CAIR.

15% increase of concentrate intake and 10% growth in calves fed with Kalvolac CAIR.

33% reduction of antibiotic use related to respiratory health in calves fed with Kalvolac CAIR.

Theo van Dinther, dairy farmer in Oss (North Brabant, The Netherlands) about Kalvolac CAIR

"The calves are growing beyond expectations. Especially in a critical period like autumn, I barely had lung problems. Now they have an optimal respiratory health and grow better. A good start is half the game, because a healthy calf will bring you so much more. "
